

## New Product Announcement

### FIREWALL CYLINDER CARTS

**Now Available from ASGE March 10, 2009 - Middlesex, NJ**

- Advanced Specialty Gas Equipment introduces a new series of cylinder carts designed to meet OSHA compliance requirements for safe storage of an oxygen cylinder located next to a fuel gas cylinder. The carts are equipped with firewalls designed to prevent the spread of fire and multi-cylinder explosion in the event of a cylinder leak and ignition. The firewall also restricts flame contact with the oxygen cylinder, preventing it from overheating which can cause excess cylinder pressure and activation of the safety. Firewalls are constructed with Marinite I™, a one-hour rated fire barrier material encased in steel panels and framing. A comprehensive product information sheet with full descriptions and features for the SG6250 Series firewall cylinder carts can be obtained by calling 888-999-2743 or [click here](#).

### Standard Features

- 1-hour fire barrier, with Marinite I™ material
- 4-ply, 16-in. speed rated pneumatic wheel
- Triple handle ergonomic design
- Electrostatic applied grey powder coat painted
- Foot plates rest flat against the floor
- 11-gauge hot roll steel all welded construction
- Individual polypropylene straps with loop chains

### About Advanced Specialty Gas Equipment

Now ASGE supplies a comprehensive line of gas handling equipment and UOP molecular sieves. Our large inventory includes thousands of regulators, manifolds, flowmeters, valves, adsorbents and accessories allowing us to ship 95% of our orders ON THE SAME DAY we receive the order. In addition to a vast inventory of standard products, ASGE has extensive custom design and manufacturing capabilities to meet special application requirements. The company provides simple, one stop shopping for its customers. For your free catalog or more information call 1-888-999-2743 or [visit us on the Web](#).
